

Heavy Equipment Operator

Heavy Equipment Operator Training

Course Description:

This training course teaches the fundamentals of safe and efficient maneuvering, traveling, and operation of heavy equipment. Discussions will occur on the effects of weight distribution, operating capacity, how equipment reacts to steering, the importance of regular maintenance, and the steps taken for safe entry & exit. Responsibilities associated with working with and around heavy equipment are also taught.

This course can be complimented with the "Powered Industrial Trucks & Forklift Training Course", which helps apply the classroom knowledge with a hands-on, in the field demonstration.

Course Objective:

The objective of this course is to provide your operators with the knowledge they need to engage in safe work practices, and understand the risks that are present on their site.

Course Length:

4 hours minimum (may fluctuate based on how many types of equipment are being taught)

Target Audience:

- Equipment Operators
- Managers/Foreman
- Safety Administrators
- Public Works Employees
