

## OSHA 10-hr Construction

### OSHA 10-hr Construction

**Course Description:**

This training course covers a variety of construction related safety topics such as: An Introduction to OSHA, proper recordkeeping, electrical safety, fall protection, personal protective equipment, the proper use of hand and power tools, and how to properly utilize scaffolding. This course reviews and discusses the best practices, while also showing examples of improper practices that have led to real life accidents. This course gives a good overall view of safety on the construction job site.

**Course Objective:**

The objective of this course is to educate your employees on the importance of maintaining a safe construction site, and aid in the overall prevention of worker injury. This course will provide them with an understanding of OSHA standards, and how to implement them.

**Course Length:**

10 hours - available in one or two day sessions.

**Target Audience:**

- Management
- Supervisors/Foreman
- Anyone working on a jobsite
- Safety Administrators

Construction 30-hr is also available for Managers and Supervisors. Call for details, pricing and scheduling availability.
